Nesting attempt data was missing at three sites (118 boxes). To approximate the actual number of nestings at these sites we took the total eggs recorded for each species at each site and divided it by the average clutch size of that species. Average clutch size was determined from the data shown on this table and were as follows: EBBL=4.2, CACH=4.4, TRSW=4.7, HOWR=4.6, Other=4.4
